The History of ChemStation

In 1977, George Homan was running a small Janitorial Supply business in Dayton, Ohio when he decided to focus on selling soap. He originally defined his business proposition as eliminating a form of environmental waste: the 55-gallon drums that were used to deliver industrial soap and then were discarded in local landfills.

By analyzing each customer's needs and formulating a chemical specifically for them, he was able to provide his customers with a unique product at an affordable price.

ChemStation has grown from 15 locations in 1990 to over 60 locations today in North America. The refillable tank system has reduced millions of potential drums and totes from entering our landfills. Our positive impact on the environment is part of George Homan's legacy.

We continue to provide our customers with high quality industrial cleaning chemicals using a unique system of delivery into refillable containers – bringing safety, convenience, and local service right to our customers' doors. To learn more, visit www.chemstation.com.

Chem U Customer Training

Check out the new page on our website – the Chem U for Customers Training and Resources page! This is a library of educational video content on sanitation and food safety related issues.

In the collection of training videos, you will find training content on Chemical Awareness and Safety, Safety Data Sheets (SDS), Personal Protective Equipment (PPE), and more. In addition to our Chem U Safety Training videos, you'll find webinars we hope will broaden your team's scope of knowledge and bring context to the importance of what they do every day.

At ChemStation, we are dedicated to supporting your sanitation and food safety training. Chem U for Customers is a vital component of our educational program, reflecting our commitment to our customers' success.

Heat Safety Tool

The OSHA-NIOSH Heat Safety Tool App can be a useful resource to help you stay safe while working in the heat.

This app allows workers and supervisors to calculate the heat index for their worksite, and, based on the heat index, displays a risk level to outdoor workers. Then, with a simple "click," you can get reminders about the protective measures that should be taken at that risk level to protect workers from heat-related illness – reminders about drinking enough fluids, scheduling rest breaks, planning for and knowing what to do in an emergency, adjusting work operations, gradually building up the workload for new workers, training on heat illness signs and symptoms, and monitoring each other for signs and symptoms of heat-related illness.

The OSHA-NIOSH Heat Tool is available in English and Spanish for Android and iPhone devices. To access the Spanish version, set the phone language to Spanish. Learn more about this app at https://www.osha.gov/heat/heat-app.

Wisdom is knowing what to do next, skill is knowing how to do it, and virtue is doing it.
– David Starr Jordan

Remember that stress doesn't come from what's going on in your life. It comes from your thoughts about what's going on in your life.
– Andrew J. Bernstein

The secret of getting ahead is getting started.
– Mark Twain

BY THE NUMBERS

Gallons of soap delivered:
413,315,943
since 1984

Empty drums saved from landfills:
7,514,835
since 1984
